**RFP No. 3611/05/12/2023**

#### **1. INVITATION FOR PROPOSAL**

Proposals are hereby invited for the “Electronic PCB assembly, integration and verification testing of modules and sub-assemblies” for various Radar systems developed by CSIR’s Radar and Electronic Warfare Impact Area.

The purpose of the Request for Proposal (RFP) is to obtain capability, pricing and general information on the business of potential Contractors for the CSIR to determine the Contractors most capable of providing the service.

This RFP document details and incorporates, as far as possible, the tasks and responsibilities of the potential bidder required by the CSIR.

This RFP does not constitute an offer to do business with the CSIR, but merely serves as an invitation to bidder(s) to facilitate a requirements-based decision process.

Responses to this Request for Proposal (RFP) (hereinafter referred to as a Bid or a Proposal) are requested from suitably qualified entities (hereinafter referred to as a Respondent or Bidder) for “Electronic PCB assembly, integration and verification testing of modules and sub-assemblies”. These panels should be populated with the requisite electronic components, assembled together as per CSIR instruction documentation. The PCB assemblies should then be tested with electrical power applied and basic functional testing should follow as stipulated by the CSIR test framework and documentation.

Suppliers must have a proven track record for the assembly, integration and verification testing of electronic Printed Circuit Boards. Please refer to Annexure B section 3.1 Scope of Work.

A service level agreement contract will be entered into with the successful supplier(s) for the provision of services specified.

The selected suppliers will be asked to sign a Non-Disclosure Agreement (NDA) with the CSIR to protect the intellectual property inherent in the module design information shared with the supplier as well as the resulting performance measurements of the produced panels.

## **1. PROPOSAL REQUIREMENTS**

## 2. PROPOSAL SPECIFICATION

### 2.1. Scope of Work

The following services to the CSIR's Radar and EW Impact Area are required:

1. Creation of a dedicated component store section for procured components and spares to store all components and material required for this project. The CSIR will have the right to perform an inspection of the store section.
2. Procurement of CSIR proprietary Printed Circuit Boards (PCB reference no will be provided), electronic components (strictly according to BOM for quantities as indicated for each assembly as they impact on the overall performance of the electronic modules), and mechanical frame components (CSIR to provide mechanical design files for manufacture).
3. Please note the following requirements:
  - a. Incoming inspections on manufactured unpopulated PCBs, mechanical and electronic components should be performed before assembly commences.
  - b. Assembly by means of automated "Pick and Place" machines are required. The use of solder stencils or automated solder printing is compulsory. The CSIR will be available for discussions around additional information required to streamline the process.
    - i. Please note that the ability to perform Leaded and Lead-free solder processes is required.
4. Post assembly inspection utilising optical, and X-ray should be performed to ensure that the assembled PCBs are free of manufacturing and assembly defects.
5. Using the Manufacturing, Assembly and Test documentation provided by the CSIR, generation of the assembly and test documents by the tenderer that conforms to the suppliers' own internal process and procedures. The final version of these documents will be a deliverable. This will include templates of detailed inspection and test reports of each assembly as per serial number.
6. Post assembly functional testing of each PCB assembly should be performed to serve as a comparison baseline for post environmental stress screening (ESS) functional testing. Set-to-Work of individual PCBs include as applicable:
  - a. Verification tests to verify connectivity and PCB integrity
  - b. Programming of all required Firmware and/or Software

- c. Verify module functionality and performance as per test procedure
7. PCB assemblies should be integrated into a complete panel by installing the assemblies into the mechanical assembly frame (as required)
8. Post mechanical assembly functional testing of each integrated assembly as per test procedure.
9. Vibration and Temperature cycling (ESS) (as per MIL-STD-810G or similar (TBC) should be performed with the PCB assemblies in their mechanical assembly frames.
10. Typical final testing of PCB assemblies as per defined CSIR tests. These may include DC power up tests of the assemblies, Vector Network Analyser (VNA) Insertion and return loss (S21 and S11) tests and digital system health and performance tests. These tests will be designed by the CSIR and the tenderer will need to follow the testing procedure and acquire or lease the equipment to perform the tests. The envisaged testing procedure should take less than 1 hour to perform per unit (includes testing all PCB assembly types) for a technician familiar with the test procedure, assuming all test equipment is setup and operational. Note: Some of these tests will require the use of a VNA. If such an instrument is not available in the organisation provision for renting such an instrument must form part of the tender. The CSIR will supply a test PC and programmer software to enable the VNA and digital testing.
11. Final quality assurance inspection and shipping of the pre-production assembly to the CSIR.
12. For larger quantities the preferred process will be as follows:
  - a. Perform pre-production manufacture of first of required assembly in order to verify that all instruction correctly understood and followed.
  - b. Based on the success (determined by CSIR testing and acceptance of the single pre-production unit) of the pre-production run, the required production run with quantities of assemblies as indicated may be performed. The relevant preceding steps will be repeated for the production run.
  - c. If for some reason the full production does not commence, all procured items will be deliverable to the CSIR including any other CSIR supplied test equipment and tools. Please note that the cost of delivering the first pre-production unit and all procured items in this event should not exceed 60% of the total value of the tender.
13. Supplier to utilise their own project management process but will be required to supply CSIR with a schedule breakdown to execute the required scope of work and a monthly progress

report indicating actual work completed and work in process against planned activities in the project schedule.

**Note:** Please note that the CSIR will provide the necessary support to the selected company to develop and improve their capability to be able to perform the sub-assembly of complex Phased Array Antenna panel units, programme them with the required firmware & software, and perform functional and performance verification testing of the integrated Phased Array Antenna panel units.

2. The tenderer shall be able to handle a pre-production run of one set of each type of PCB assembly (including mechanical assembly frame) and then a possible production run of the rest of the PCB assemblies (with associated mechanical assembly frame) if the quality of the pre-production run assembled PCBs meet expectations.
3. Supplier to provide CSIR with valid quality management certification to relevant standards.
  - a. Supplier to ensure appropriate Quality Assurance processes are in place and shall have quality assurance representatives involved throughout each part of the process.
  - b. The tenderer shall have records and keep reports for each assembly as per serial number and for each stage of the process.
